

FleetReach™

TRUSTED FLEET MANAGEMENT SOLUTIONS FROM LONGVIEW ADVANTAGE.

FleetReach™ integrates real-time location and engine information to produce powerful, color-coded, online management reports. These customizable reports provide equipment dealers, contractors and large fleet operators the information they need to effectively manage their assets.

Effective Preventative Maintenance

FleetReach™ generates customized reports at preprogrammed intervals to inform dealers and service managers of the operational status of their assets. Tracking up-to-the-minute engine hours and location, FleetReach™ delivers weekly color-coded reports via the Internet that highlight any equipment requiring servicing and other key utilization information.

This enables:

- Equipment dealers to offer their customers proactive service contracts, increasing dealer revenues as well as improving service to their customers.
- Efficient management and maintenance of rental fleets.
- Service managers to proactively manage fleet service intervals, avoiding costly breakdowns and loss of income due to downtime; extending the life and value of the equipment.

Increased Asset Utilization

FleetReach™ generates detailed maps that depict the real-time location of all assets being monitored. Not only does this help to avoid fraud, it also:

- Reduces expenses by facilitating more efficient route scheduling or planning.
- Promotes efficient deployment of worksite assets.

With FleetReach™:

- Efficient fleet management costs only pennies a day.
- Billing hassles disappear with the engine readings of all monitored assets available with a click of the mouse.
- Unlike our competition, FleetReach™ covers both rural and urban North America.

Harnessing the benefits of GPS, cellular and Internet technologies, FleetReach™ is exclusively endorsed by the North American Equipment Dealers Association.
