

NEW Patented Microprocessor
NEW Gear Drive System (30% stronger)
NEW Features; Increased Reliability

PriorityStart!®

12 Volt ProMax

Stops Dead Batteries

- Saves You Money
- Totally Automatic
- Maximize Battery & Alternator Life
- Voltage "Spike" Protection
- Battery Power Indicator
- Fix-Before-Failure

No Buttons to Push
No Timer to Set
No Hood to Lift

PriorityStart! ProMax is a **TOTALLY AUTOMATIC!** computerized voltage disconnect system; protects your starting power, battery and alternator, thus protecting your budget. Constantly **MONITORS** battery voltage when **KEY** is **OFF - DETECTS** and **Automatically DISCONNECTS** then **Automatically RECONNECTS** by operating headlight switch. Four issued U.S. patents.

PriorityStart! is TOTALLY AUTOMATIC!

Consider: Radios, Computers, Lights, Cameras, GPS, MDT, and many other electrical accessories currently on fleet vehicles are killing batteries.

Thousands of Dollars Are Lost Because Of Dead Batteries and Alternators. Consider

- Lost Man Hours
 - Down Time
 - Lack of Vehicle Availability
 - Expensive Road Calls
 - Battery and Alternator Damage
- ...Caused by Dead Batteries!

All Too Often... Operators leave a battery drain going...

- When in a hurry and or over a weekend?
- Over a vacation period?
- Forgetting radios, computers, MDT, or any other electrical accessories ...Results are Dead Batteries!

Patented technology disables the system when engine is running if battery voltage drops below disconnected threshold.

- Install in less than 15 minutes
- Requires no hard wiring – No buttons to push – No timer to set – No lifting hood
- Mil-Standard (*military strength*) components
- Vibration/Shock protected
- Cost about the same as a new battery
- Universal design fits either top or side post batteries
- Operates only when needed providing AUTOMATIC starting protection

Fix-Before-Failure or preventative maintenance saves your fleet money

PriorityStart!® Stops Dead Batteries

Product Improvement

Baton Labs, Inc (BLI) has made a number of improvements to the **PriorityStart!** system for 2008. The new units now have (1) NEW advanced technology microprocessor with new features i.e. [Zener diode added to stabilize amplifier circuit; additional noise filter to the switch detect circuit; gain in the working frequency on the trigger circuit; low pass filter added to the trigger circuit] (2) MIL standard discrete components with higher values and temperature extremes, able to handle all the accessories entering the fleet market (3) improvement in gear design [*gears designed and manufactured by a precision gear manufacturing firm*] (4) modification of the integrated chip control of the opening/closing of the heavy duty contact disc (5) contact disc now has twice the "cross-sectional" size of the 6 GA positive cable (6) battery power indicator (7) improvements in the engine run feature (8) lower reconnection threshold, and (9) improved ground wire connection.

All new **PriorityStart!** units incorporate the above changes. The improvements have resulted in an overall higher level of reliability and confidence in the **PriorityStart!** system.

Starting is the Priority!

DEAD BATTERIES **COST FLEETS**

***Down-Time, Man-Hours, Expensive
Road Calls, Equipment Damage &
MORE!***

**Dead Batteries Make a Monkey Out
Of Your Vehicle Maintenance Budgets!**
